

IN THE SPECIFICATION

Please amend the specification as follows:

1. Please amend paragraph [0018] on page 7, to read as follows:

B' conel.

The method further comprises the step of switching the power mode of the central processing unit from the power saving mode to the normal mode when the power is supplied to the computer system by a user where the computer system is in the power saving mode, and the step of displaying an identification window display for identifying the reserve-recording conditions where the power saving mode of the central processing unit is switched from the power saving mode to the normal mode.

2. Please amend paragraph [0019] bridging pages 7 and 8, to read as follows:

B' cont'd

According to still another aspect of the present invention, this and other objects may also be achieved by a provision of a method for storing television signals in the computer system, allowing a normal mode and a power saving mode to be switched therebetween wherein [[a]] power is supplied to the central processing unit under the normal mode whereas ~~the~~ power is not supplied to the central processing unit under the power saving mode, comprising the steps of setting up reserve-recording conditions such as start time of the reserve-recording of the television signals; identifying whether the power mode of the central processing unit is in the power saving mode when a start time of the reserve-recording approaches; and storing the television signals received from the outside by converting the power saving mode to the normal mode thereof, if the power mode of the central
